

Beyond GE-06

Cristiano Passerini

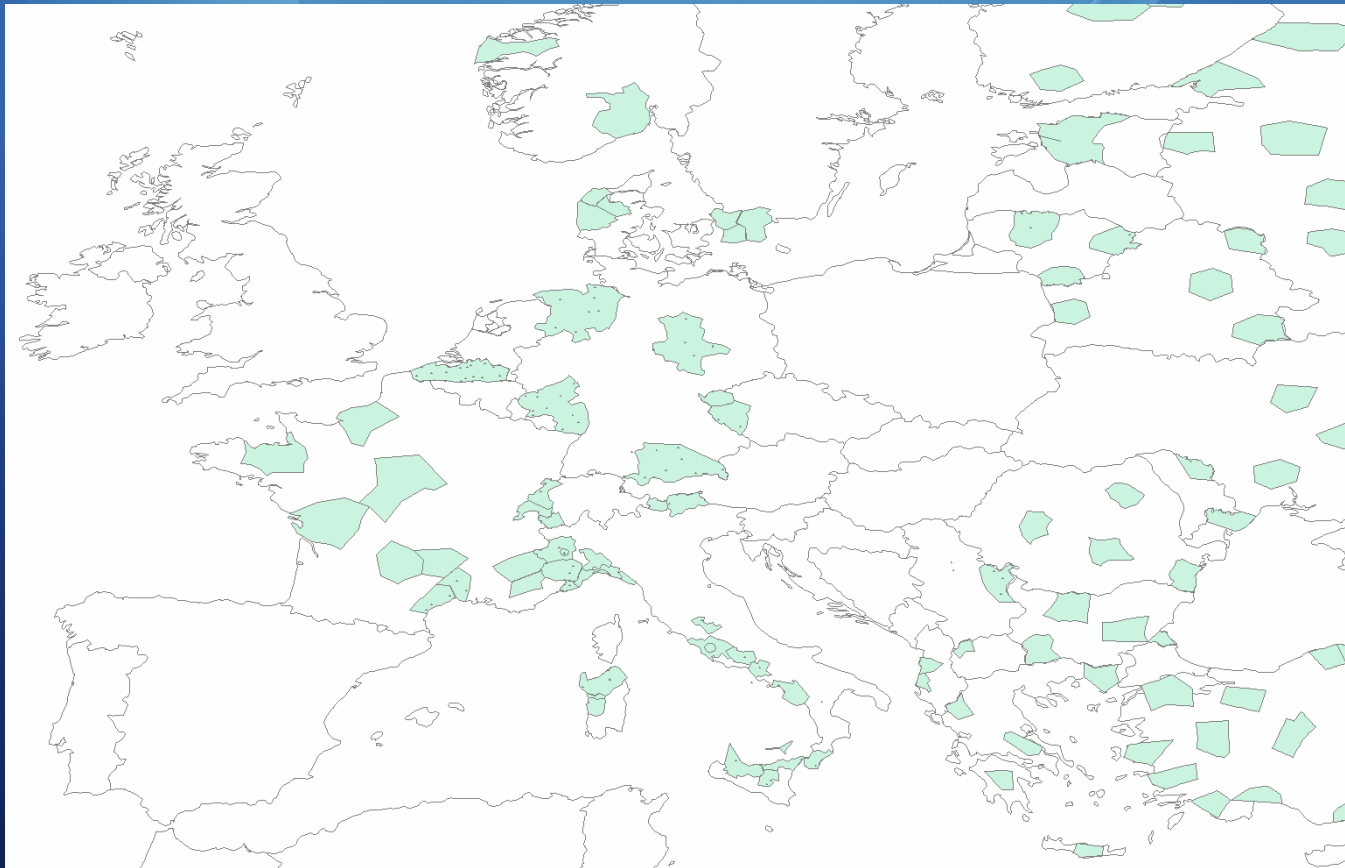

Contents

- GE-06 Rights of use
- A possible coordination model
- Provisions for a flexible coordination
- General criteria for spectral resources sharing

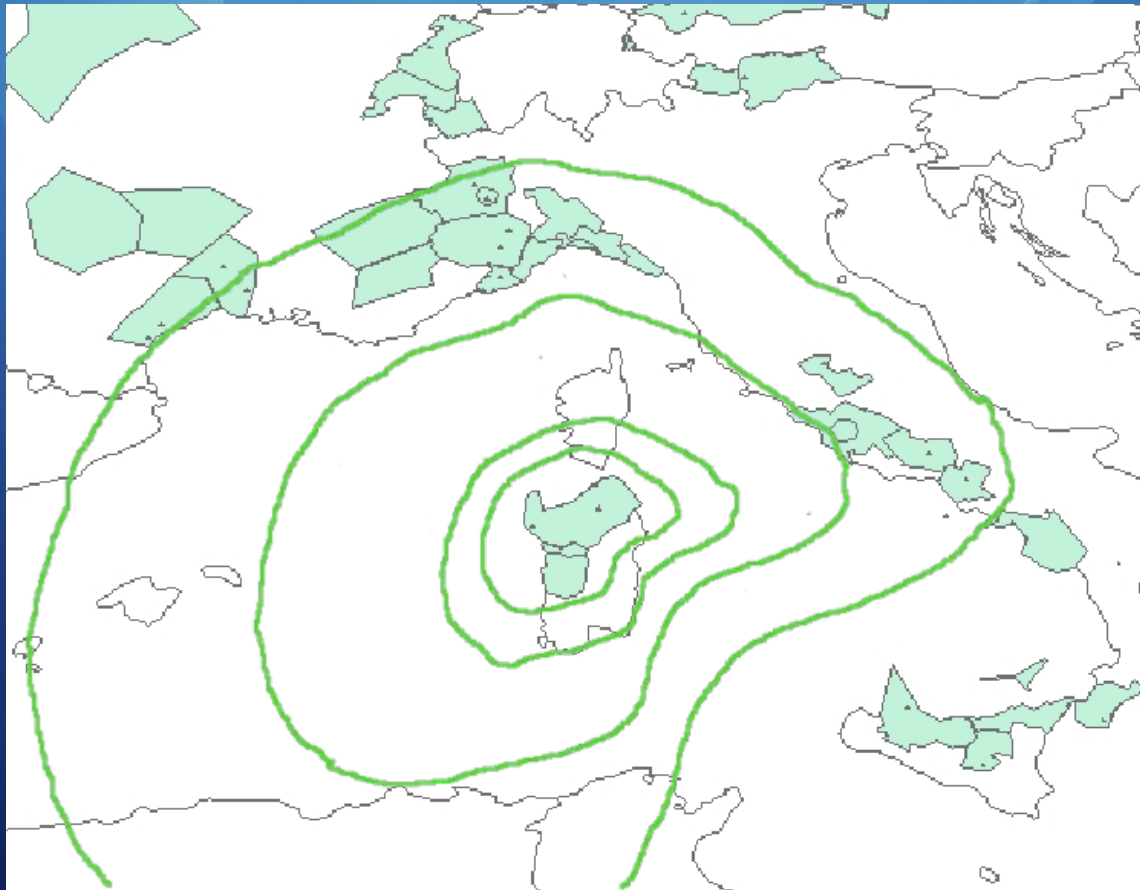

Premise and Goals of the GE-06 Agreement

A planning example

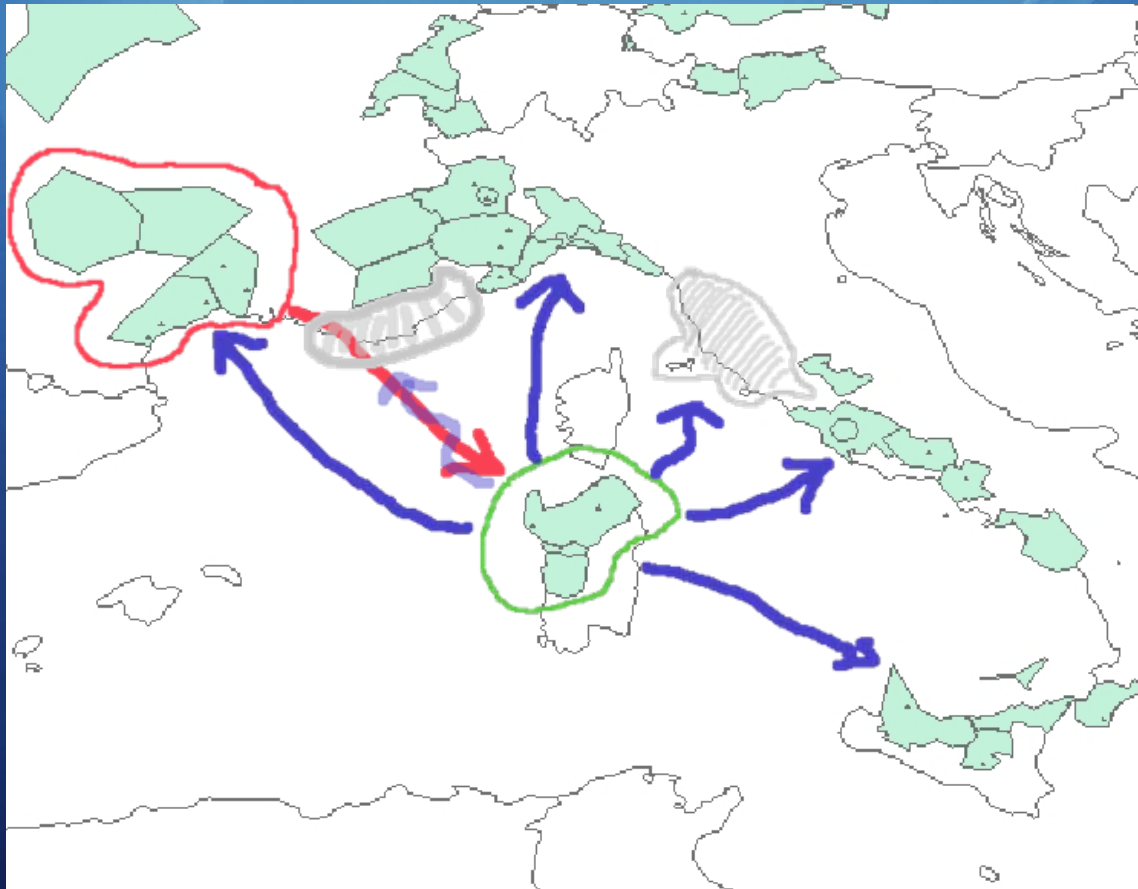

Spectral Masks of Plan Entries

Extendibility

- GE-06 Final Acts Art. 4
- Issues arising from “intensive” and systematic extension
 - Rigidity of the propagation prediction model
 - Rigidity in the reuse scheme of the resources
- Need to agree bi/multi-laterally different provisions and procedures for the extension

A coordination model

Model assumptions

- Interferential framework frozen by the GE-06 Plan entries
- Interference is meaningful only in co-channel areas
- Isotropic interference
 - ... if intensive extension does not require further actions..

General criteria for spectral resources sharing
