Risks Beyond Paradigm Shift

- In **tasks** the AI silently reprioritizes.
- In **business processes** it bypasses.
- In **KPIs** it deems "non-critical."
- In **policy rules** it doesn't know how to interpret.

Benefits and Blind Spots with AI

Benefits Zone: AI delivers clear value, low risk, high efficiency

Blind spot: technically powerful, ethically fragile.

Multilevel Risk Chain

A systemic approach from
Technical up to
Fundamental Rights

TECHNICAL LAYER

- Vulnerability in MLmodel or configuration
- Data poisoning / telemetry manipulation
- Unexpected input (e.g. adversarial attacks)

FUNCTIONAL LAYER (AI TASK EXECUTION)

- AI reprioritizes or misclassifies a critical network function
- Agent misalignment with operational goals
- Silent failure in decision logic (no alert triggered)

ORGANIZATIONAL LAYER

- Bypass of existing business rules or human in the loop control
- Misalignment with operational KPIs
- Automation overrides domain expert judgment

HUMAN IMPACT LAYER

- Indirect harm to people (e.g. outages of emergency services)
- Discriminatori routing / prioritization

Governance by Design

It is a call for new research directions to model harm before it happens, not only regulations

An Example from PNRR SERICS Spoke 7 - Eraclito Project

A preliminary cross-disciplinary exploration of how technical risks cascade into human consequences through a semantically rich ontology and a real-world test case.

Closing Thoughts

In *The Cloven Viscount*, Calvino leaves us a warning for our times:

Let's stay whole.

...that also means

- *Lets'find a balance between overregulation and innovation*
- *Let's find a balance between leveraging AI and mitigating risks*
- *Let's connect the dots between disciplines, research programs, and across the ecosystem for a collective intelligence*

*The challenge isn't to build perfect machines
it's to take responsibility for what machines decide.*
